Standards : 

CERTIFICATIONS

A QUICK GUIDE

AS/NZ 4602

This standard mainly focuses on garments that use either retroreflective or fluorescent materials. Clothing can be classified as Class D (daytime use only), Class N (night-time use only), and Class D/N (day and night use). Reflective clothing is generally to help vehicle or moving machinery operators, ensuring other people in the same space are visible.

AS/NZ 1906.4

It dictates the colour and requires that the gear encircles the upper torso properly. The front and back of the clothing should have a 0.2 square metre high-visibility colour. However, this measurement does not include silver tape, screenprints, and logos.

AS/NZS 4399

It is for high-visibility personal equipment with UPF or ultraviolet protection. This type of PPE clothing is a significant investment for anyone working under the sun. It's essential to check the UPF rating of the PPE, which should at least have 15 UPF.
