A QUICK GUIDE

EN 20471

EN ISO 20471 is an international standard that specifies requirements on visible workwear for employees in high-risk areas.

EN ISO 20471 is divided into three classes, in accordance to the risk zone you work in and how well the product is able to protect the employee. It is the visibility requirement – and thus the requirement for the area consisting of reflectors and fluorescent materials – that determines which class you need to choose.

	CLASS 3	CLASS 2	CLASS 1
FLUORESCENT MATERIAL	0.80 sq. m.	0.50 sq. m.	0.14 sq. m.
REFLECTIVE TAPE	0.20 sq. m.	0.13 sq. m.	0.10 sq. m.

EN 343

EN 343 specifies the requirements and test methods for materials and the seams of protective clothing that has been designed to give protection against precipitation (i.e. rain, snow), mist and ground moisture.

	CLASS 3	CLASS 2	CLASS 1
TEST ON FABRIC	≥ 13 000 Pa, after pre-treatment	≥ 8 000 Pa , after pre-treatment	≥ 8 000 Pa, before pre-treatment
TEST ON SEAM (BEFORE PRE TREATMENT)	≥ 13 000 Pa	≥ 8 000 Pa	≥ 8 000 Pa

ANSI/ISEA 107

ANSI/ISEA 107 is the industry regulation established by the American National Standards Institute and the International Safety Equipment Association that sets out garment design requirements for multiple Garment Types for high-visibility vests, jackets, pants and more— thus, three different Performance Classes within those Types.

GARMENT TYPE	TYPE O (OFF-ROAD)	TYPE R (ROADWAY)	TYPE R (ROADWAY)	TYPE P (PUBLIC SAFETY)	TYPE P (PUBLIC SAFETY)
PERFORMANCE CLASS	CLASS 1	CLASS 2	CLASS 3	CLASS 2	CLASS 3
BACKGROUND MATERIAL REQUIREMENT	217 sq. in.	775 sq. in.	1240 sq. in.	450 sq. in.	775 sq. in.
REFLECTIVE MATERIAL REQUIREMENT	155 sq. in.	201 sq. in.	310 sq. in.	201 sq. in.	310 sq. in.

RIS-3279-TOM

RIS-3279-TOM (formerly GO-RT 3279) is a high visibility standard that only applies to the rail industry in the UK. The standard is based on the European Norm EN 20471:2013, and garments must comply to Class 2 High Visibility. The standard states the following: ‘high visibility clothing worn by people on the lineside or on or near the line should conform to a single standard for the colour and luminance of background material and that this standard will accord with the detail contained within BS EN 20471:2013 high visibility clothing – Test methods and requirements (ISO 20471:2013).’
